^{*} This agency is considered a "large agency" for the purposes of the Mapped Distances and Mapped Distance Sample Size. See below note for additional information.

[†] The "Mapped Distance" is an estimate of mapping accuracy calculated based on how many reports have been manually mapped/re-mapped after being submitted and reviewed for accuracy of the Latitude and Longitude coordinates provided. This Mapped Distance estimate is a best determination that a manual mapper was able to make based on the information provided in the initial report. The "Sample Size" column indicates how many records were checked for the Mapped Distance calculation.

Mapping rules are as follows:

1. All crashes containing either fatal, serious, or minor injuries are mapped.
2. Remaining Private Property crashes are not mapped.
3. Remaining crashes containing a complaint injury, or an individual who was transported from the scene are mapped.
4. Remaining crashes involving a Commercial Motor Vehicle, or occurring in a Work Zone are mapped.
5. Remaining crashes involving a deer or animal are not mapped.
6. Remaining crashes that are not from a "large agency" are mapped.

[‡] Agencies submitting paper reports will see their timeliness adversely affected due to the manual process of entering the data into GEARS.

[♦] The "% YTD Differential" column compares your current year's count (year to date) to the previous year for the same time period. This will be a percentage from of the current (YTD) count divided by the previous year's (YTD up to the same date) count, anywhere from 0% to 100%.

If you have any questions about this report or your agency's data, please reach out to the GEARS Support Team at gears.support@lexisnexisrisk.com or 866-495-4206.
